

Publications Reissue Highlights

Manual: *ACI Java Server Framework Reference Guide*

Number: CF-DA000-02-ES

Date: Jun-2006

Software: Release 1.0 Version 06.2

The following table highlights the major changes that have been made in the most recent update to the *ACI Java Server Framework Reference Guide*. The first column of the table lists the sections and appendixes in which major changes have been made. The second column of the table describes the major changes for each section or appendix. These changes update the guide from release 1.0, version 05.4 to release 1.0, version 06.2.

Section/ Appendix	Major Changes
All	Adds security best practices symbols in the margin next to information related to cross-industry best practices for protecting sensitive data that is stored, processed, or transmitted in a BASE24-es system.
1	Adds jax-qname and namespace to the list of JARs used from the Java Web Services Developer Pack (JWSDP). Adds descriptions of Jaxen and Dom4j third-party JARs used by the Java Server Framework.
2	Clarifies the advantages to using each of the ACI-authored JDBC drivers written within a JDAL layer—JDAL and JDAL2.
3	Adds security best practices recommendations for using the Secure Sockets Layer (SSL) option with the HTTP and TCP/IP protocols. Updates the description of the Protocol Options field on the External Connections window for the PATHSEND protocol to indicate that MDSHDR is a valid option for this protocol. The MDSHDR option indicates to prepend a Message Delivery Subsystem (MDS) header to request messages.
4	Adds a topic for selective tracing through the configuration of categories for an appender in the TraceConfig.xml file.

Section/ Appendix	Major Changes
