

Publications Reissue Highlights

Manual: *ACI Java Server Framework Reference Guide*

Number: CF-DA000-02-ES

Date: Oct-2007

Software: Release 1.0 Version 07.4

The following table highlights the major changes that have been made in the most recent update to the *ACI Java Server Framework Reference Guide*. The first column of the table lists the sections and appendixes in which major changes have been made. The second column of the table describes the major changes for each section or appendix. These changes update the guide from release 1.0, version 06.4 to release 1.0, version 07.4.

Section/ Appendix	Major Changes
All	All references to Eracom have been changed to SafeNet (Eracom). SafeNet, Inc. acquired Eracom Technologies AG in 2005.
1	Adds descriptions of the auditing and user security services that have been added to the JSF. Adds a description of the workflow subsystem.
2	Adds an overview of the HSM Configuration data source (HSMCNFG) to the “Data Sources” topic in the Configuration and Instrumentation subsystem. This data source enables Java servers to access a hardware security module (HSM) for cryptographic functions. Adds an overview of the workflow subsystem. This subsystem uses transaction map and transaction meta map XML files to configure the messages that a JSF-based application can process and the flow of work (transaction processing) to be performed on those messages.
3	Adds a detailed description of the HSM Configuration data source (HSMCNFG) and its fields. It also describes how to initialize the HSMSERVICE, which uses the HSMCNFG, in an initialization.function.n.classname property and provides a sample HSMCNFG configuration.
4	Clarifies that subsystem IDs of 3000 and above rather than 3499 and above are reserved for JSF-based application events. Adds a description of the SecureDelete command line utility, which can be optionally provided with JSF-based applications to securely delete files that contain sensitive cardholder data.

Section/ Appendix	Major Changes
----------------------	---------------

- | | |
|---|---|
| 5 | <p>Clarifies that the event.config property replaces the event.log4j.config.url property.</p> <p>Removes the initialization.function.n.methodname property. The initialization method is assumed.</p> |
| A | <p>Adds descriptions of the optional system properties that indicate the auditing, security, and framework services used by the ACI desktop user interface application.</p> <p>Adds descriptions of Java Authentication and Authorization Service (JAAS) system properties required for pluggable authentication with third party JAAS authenticators.</p> <p>Adds descriptions of third-party JAAS authenticator configuration files and properties required for pluggable authentication with third party JAAS authenticators.</p> |
| A | <p>Adds database service names for the USEC application.</p> <p>Adds names for database services added in version 07.4.</p> <p>Updates the list of recommended database services to be cached for version 07.4.</p> <p>Clarifies the descriptions of several properties to support the automatic extract of the User Audit Log data source (UALOGD) to an XML file.</p> <p>Updates the example config.properties file to include the properties needed for automatic user audit log extracts.</p> <p>Updates the descriptions of the usec.host and usec.port properties to indicate that they are not required if the USEC application runs onboard the ESWEB server.</p> <p>Adds a description of the user.security.version property, which dictates whether the USEC application is to run onboard/in-process in the ESWEB server or as an outboard process and whether some user security functionality is available.</p> <p>Updates the “Security Considerations” topic to include general SSL overview and troubleshooting material as well as specific information and procedures for implementing SSL in the Apache Tomcat servlet container and ACI desktop user interface clients.</p> |
| B | <p>Adds a description of the dh.ifx.duplicate.checking.mode property, which determines whether and how the IFX Manager process checks for duplicate transactions.</p> |
