

Publications Reissue Highlights

Manual: *ACI Java Server Framework Reference Guide*

Number: CF-DA000-02-ES

Date: 05/2005

Software: Release 1.0 Version 05.2

The following table highlights the major changes that have been made in the most recent update to the *ACI Java Server Framework Reference Guide*. The first column of the table lists the sections and appendixes in which major changes have been made. The second column of the table describes the major changes for each section or appendix. These changes update the guide from release 1.0, version 04.4 to release 1.0, version 05.2.

Section/ Appendix	Major Changes
----------------------	---------------

- | | |
|-----|--|
| All | The publication number has been changed from ES-DA000-02 to CF-DA000-02-xx, where xx is two to three characters identifying the ACI application to which the version of the guide applies. For BASE24-es, the publication number is CF-DA000-02-ES. Only the appendices specific to BASE24-es are included in this version. The <i>ACI Java Server Framework Reference Guide</i> will now be published in separate versions specific to each ACI application built on the Java Server Framework. |
| 1 | Clarifies that system properties can be set in the configuration properties file. If this file is not specified in the -Dconfig.filename system property, it defaults to a file named "config.properties". |
| 2 | Expands and clarifies the discussion of auditing user actions for the database subsystem. |
| 3 | Clarifies that the process.id property can be specified in the configuration properties file or in a JVM runtime argument.

Adds support for external connections using the Pathway (PATHSEND) protocol on HP NonStop platforms. |

Section/ Appendix	Major Changes
----------------------	---------------

-
- | | |
|---|--|
| 4 | <p>Adds the new trace.config and event.config properties, which can be used instead of the trace.log4j.config.url and event.log4j.config.url properties, respectively. These new properties allow you to use substitution variables for system properties in the property value. You can also use the same substitution variable scheme for specifying file locations in the TraceConfig.xml and EventConfig.xml files.</p> <p>Updates the cleanup.userauditlog.retention.days property description to include Payment Card Industry (PCI) Data Security Standard audit trail history retention requirements.</p> |
| 5 | <p>Clarifies that system properties can be set in the configuration properties file. If this file is not specified in the -Dconfig.filename system property, it defaults to a file named "config.properties".</p> <p>Adds options for configuring the process ID and configuration properties filename system properties. The options vary according to whether the JSF application is a Web-based server application or a non-Web application.</p> <p>Clarifies the description of the db.audited property to indicate it controls the auditing of all ACI desktop user interface activity, not just database actions.</p> |
| A | <p>Adds descriptions of the extract.userauditlog.interval.days and extract.userauditlog.starttime properties and updates the timertask.function.n.classname and report.userauditlog.loc properties for support of automating user audit log extracts.</p> <p>Adds a description of the LogChannelTimeout property. This property indicates whether the UAUD application generates error event messages for auditing records sent to the User Audit Log data source (UALOGD) that are not responded to within the allotted time limit. If this property is not configured, it defaults to false (event messages are not generated).</p> |
| B | <p>Adds property descriptions for configuring cleanup of the ATM Native Message Log data source (ATLGD).</p> |
