

Publications Reissue Highlights

Manual: *BASE24-pos Merchant Host Interface Manual*

Number: PS-DH020-01

Version: 3

Date: 11/1998

The following table highlights the major changes that have been made to the ***BASE24-pos Merchant Host Interface Manual*** in this version. The first column of the table lists the sections and appendixes in which major changes have been made. The second column of the table describes the major changes for each section or appendix. This version updates the manual from product release 5.1 to release 5.3.

Section/ Appendix	Major Changes
1	Removes references to the Network Environment Source File (NEFS).
2	Removes references to the NEFS. Corrects default values for the POS-DH-MAX-IN-CORE and PAS-DH-MAX-TDFS params.
3	Removes references to the NEFS. Specifies the Tandem Event Management Service (EMS) instead of a generic logging process in the Merchant Host Interface (MHI) module initialization steps.
4	Updates the description of response code 204. Updates the field length and response code field for FID a. Adds subfields (SFIDs) D, E, F, G, H, J, K, and L to FID 6. Updates examples of request message requirements.
5	Clarifies the contents of a response to a download (the Merchant Host Interface module includes FIDs V and W only). Corrects the definition of the Processing Flag field of the Download Key. Adds SFID record separator characters to request message examples.
6	Specifies EMS instead of a generic logging process in the Merchant Totals process initialization steps.

Section/ Appendix	Major Changes
8	Changes references to NEFS fields. Updates DID s (referral telephone number on MNCf download record 06 screen). Removes the MAC ENCRYPTION KEY and PIN ENCRYPTION KEY fields from MHCF screen 2. These keys are now generated automatically.
10	Removes this section from the manual. The information that was in this section can be found in the <i>BASE24 Device Control Manual</i>.
