

Publications Reissue Highlights

Manual: *BASE24 IEP Configuration Manual*

Number: OE-AE000-01

Version: 3

Date: 07/2000

The following table highlights the major changes that have been made to the *BASE24 IEP Configuration Manual* in this version. The first column of the table lists the sections in which major changes have been made. The second column of the table describes the major changes for each section. This version updates the manual from product release 1.1 to release 1.3. In this version, the title of the manual was changed from *NET24 IEP Configuration Manual* to *BASE24 IEP Configuration Manual* because the Integrated Endpoint process is used only with BASE24 products.

Section	Major Changes
All	The titles of all ITS and IEP manual references have been changed from NET24 to BASE24 because these manuals are used only with BASE24 products. References to these manuals have been changed accordingly throughout the manual.
1	Removes references the Network Environment Source File (NEFS). This file is no longer used under XPNET 3.0. Removes references to the Electronic Banking Message Standard Endpoint Class Handler object. This object is no longer supported in release 1.3. Updates subvolume locations of event message template files and corrects the subvolume location for online log message documentation files.
2	Reorganizes the section. Use of the Integrated Endpoint process in an ITS environment is now presented first. The hypothetical use of the Integrated Endpoint process in other environments follows. Reasons for adding the Integrated Endpoint process to these environments have been added. Replaces references to server classes with services. Under XPNET 3.0, service-based routing replaces generic queue functionality.
3	Updates Destination File (DEST) field descriptions with XPNET 3.0 attribute terminology. Replaces references to Queue processes and server classes with services throughout. Under XPNET 3.0, service-based routing replaces generic queue functionality. Corrects the pass-through routing example.

Section	Major Changes
4	Updates subvolume locations for release 1.3. Corrects references to the NET24 Performance Monitoring Subsystem.
5	Replaces references to the Network Environment Source File (NEFS) with references to the Network Environment File (NEF). Updates attribute names and usage, as well as sample ITS station and process definitions, for XPNET 3.0. Adds a discussion of the SERVICE attribute. Configuration requirements for previous versions of XPNET (i.e., 2.0 and 2.1) have been removed. This information can be obtained from the previous version of the manual.
A	Updates Destination File (DEST) field descriptions with XPNET 3.0 attribute and service-based routing terminology.
B	Removes this appendix from the manual. Information on support for previous releases of XPNET can be obtained from the previous release of this manual.
Glossary	Replaces references to the Network Environment Source File (NEFS) with references to the Network Environment File (NEF). Replaces references to server classes with services. Under XPNET 3.0, service-based routing replaces generic queue functionality.
