

Publications Reissue Highlights

Manual: *BASE24 IEP Objects Reference Manual*

Number: OE-AE000-03

Version: 3

Date: 07/2000

The following table highlights the major changes that have been made to the *BASE24 IEP Objects Reference Manual* in this version. This version updates the manual from product release 1.1 to release 1.3. In this version, the title of the manual was changed from *NET24 IEP Objects Reference Manual* to *BASE24 IEP Objects Reference Manual* because the Integrated Endpoint process is used only with BASE24 products. The first column of the table lists the sections in which major changes have been made. The second column of the table describes the major changes for each section.

Section	Major Changes
All	The titles of all ITS and IEP manual references have been changed from NET24 to BASE24 because these manuals are used only with BASE24 products. References to these manuals have been changed accordingly throughout the manual.
1	Removes references to the Network Environment Source File (NEFS). This file is no longer used under XPNET 3.0. Updates XPNET configuration terminology. Elements have been replaced by attributes in XPNET 3.0. Replaces server class terminology with services. Updates DDL subvolume locations for release 1.3. Removes the “DDLDOC Usage” topic because it duplicates information that can be found in the <i>BASE24 Files and Record Structures Reference Manual</i>.
2	Replaces server class terminology with services.
3	Corrects a reference to the <i>BASE24 Core Files and Tables Maintenance Manual</i> .

Section	Major Changes
4	Replaces references to interactive voice response system (IVR) with remote banking endpoint device. Removes references to the Electronic Banking Message Standard Endpoint Class Handler object. This object is no longer supported in release 1.3. Removes reference to Endpoint Class Handler objects that have not yet been developed. Clarifies that the network overload management actions described reflect how the Voice Response Unit Endpoint Class Handler object handles a network overload situation. Updates network overload actions the XPNET process can perform.
7	Updates XPNET configuration terminology. Elements have been replaced by attributes in XPNET 3.0.
