

Publications Reissue Highlights

Manual: *BASE24 ITS Kernel Files Maintenance Manual*

Number: OK-AE000-02

Version: 3

Date: 07/2000

The following table highlights the major changes that have been made to the *BASE24 ITS Kernel Files Maintenance Manual* in this version. This version updates the manual from product release 1.1 to release 1.3. In this version, the title of the manual was changed from *NET24 ITS Kernel Files Maintenance Manual* to *BASE24 ITS Kernel Files Maintenance Manual* because the ITS kernel files maintenance screens are used only with BASE24 products. The first column of the table lists the sections in which major changes have been made. The second column of the table describes the major changes for each section.

Section	Major Changes
All	The titles of all ITS and IEP manual references have been changed from NET24 to BASE24 because these manuals are used only with BASE24 products. References to these manuals have been changed accordingly throughout the manual.
1	For systems running under XPNET 3.0, the source class must match the value of the SOURCECLASS attribute for processes and stations from which messages can originate. This value is configured in the Source Class Map File (SCM). References to the Network Environment Source File (NEFS) were removed. The NEFS is no longer used under XPNET 3.0. Because object and extended memory table name abbreviations are used extensively on ITS kernel configuration and process control screens, tables that cross-reference these abbreviations to their complete names have been added.
6	A reference to the <i>NET24-XPNET Network Control Command Reference Manual</i> was corrected. The example subvolume location for the Extended Memory Table Build utility object file was updated for release 1.3.
7	References to Queue processes were removed. Queue process functionality is replaced by service-based routing in XPNET 3.0.
11	The subvolume location (OK13LOGM) for online log message documentation files was updated.

Section	Major Changes
13	References to Queue processes were removed. The EBMS entry was removed from the example LCONF Warmboot screen 1. The Electronic Banking Message Standard (EBMS) Interface is not supported in release 1.3.
15	Default records for the Object File (OBJ) were updated. The default record for the Space object was removed. All default records for the Electronic Banking Message Standard (EBMS) Interface were removed because this interface is not supported in release 1.3.
16	References to Queue processes were removed. The EBMS entry was removed from the example Param Warmboot screen 1. The Electronic Banking Message Standard (EBMS) Interface is not supported in release 1.3.
17	References to Queue processes, queues, and the Network Environment Source File (NEFS) were removed. The description of the PPD NAME field was clarified.
18	References to Queue processes and the Network Environment Source File (NEFS) were removed.
20	References to Queue processes were removed.
23	For systems running under XPNET 3.0, the source class must match the value of the SOURCECLASS attribute for processes and stations from which messages can originate. References to the source class value used for previous releases of XPNET were removed. This information can be obtained from the previous version of this manual. References to the Network Environment Source File (NEFS) were removed. The NEFS is no longer used under XPNET 3.0.
24	The subvolume location (OK13LOGM) for online log message documentation files was updated.
