

Publications Reissue Highlights

Manual: *BASE24 ITS Kernel Objects Reference Manual*

Number: OK-AE000-03

Version: 3

Date: 07/2000

The following table highlights the major changes that have been made to the *BASE24 ITS Kernel Objects Reference Manual* in this version. This version updates the manual from Integrated Transaction Services release 1.1 to release 1.3. In this version, the title of the manual was changed from *NET24 ITS Kernel Objects Reference Manual* to *BASE24 ITS Kernel Objects Reference Manual* because the ITS kernel environment is used only with BASE24 products. The first column of the table lists the sections in which major changes have been made. The second column of the table describes the major changes for each section.

Section/ Appendix	Major Changes
----------------------	---------------

All	The titles of all ITS and IEP manual references have been changed from NET24 to BASE24 because these manuals are used only with BASE24 products. References to these manuals have been changed accordingly throughout the manual.
1	Removes references to ITS Queue processes. Under XPNET 3.0, service-based routing replaces generic queue functionality. Removes the Message Header Get Message Queue Process Queue State member function from the Object to XPNET lexicon. This function is not needed because XPNET 3.0 does not support Queue processes. Corrects the names of the Start and Stop member functions in the Trace to Object lexicon. Updates DDL subvolume locations for release 1.3. Removes the “DDLDOC Usage” topic because it duplicates information that can be found in the <i>BASE24 Files and Record Structures Reference Manual</i>.
2	Clarifies that the presence of flat segments allows the large-memory model to be used. The large-memory model toggle determines whether the large-memory model is used. Clarifies the discussion of the large-memory model toggle.

Section/ Appendix	Major Changes
3	Updates attribute names for XPNET 3.0. Removes source class information for previous releases of XPNET. This information can be obtained from the previous version of this manual.
5–7	Corrects references to the <i>BASE24 ITS Kernel Configuration Manual</i>.
8	Clarifies the actions that objects can take when network overload is detected in an incoming message. Removes references to generic queues. Under XPNET 3.0, service-based routing replaces generic queue functionality. Updates attribute names for XPNET 3.0. Removes source class information for previous releases of XPNET. This information can be obtained from the previous version of this manual. Removes network overload detection information for ITS Queue processes. Updates the XPNET network library routine file location for XPNET 3.0. Removes network overload detection and library usage information for previous releases of XPNET. This information can be obtained from the previous version of this manual. Removes the description of the NOM-PERCENT-THRESHOLD param since this param is now described in the <i>BASE24 Logical Network Configuration File Manual</i>. Removes the Message Header Get Message Queue Process Queue State member function from the list of member functions received. This function is not needed because XPNET 3.0 does not support Queue processes.
9	Corrects a reference to the <i>NET24-XPNET Network Control Operations Guide</i>.
