

Publications Reissue Highlights

Manual: *BASE24 Security Best Practices*

Number: BA-AE000-16

Date: Dec-2009

Software: Release 6.0, version 10

The following table highlights the major changes that have been made in the most recent update to the *BASE24 Security Best Practices*. The first column of the table lists the sections and appendixes in which major changes have been made. The second column of the table describes the major changes for each section or appendix. These changes update the manual to release 6.0, version 10.

Section/ Appendix	Major Changes
2	Adds a statement that for BASE24 to be PCI compliant, cryptographic material stored by previous versions of BASE24 must be removed. Adds information about WiFi security. Install perimeter firewalls between any wireless networks and the cardholder data environment, and configure these firewalls to deny or control (if such traffic is necessary for business purposes) any traffic from the wireless environment into the cardholder data environment. Adds restrictions for implementing Wired Equivalent Privacy (WEP). For new wireless implementations, it is prohibited to implement WEP after March 31, 2009. For current wireless implementations, it is prohibited to use WEP after June 30, 2010. Adds a statement about implementing two-factor authentication for remote access to the network by employees, administrators, and third parties.
3	Adds information about setting parameters to automatically purge the contents of the Transaction Log File (TLF) or POS Transaction Log File (PTLF). Adds a statement that to achieve PCI compliance, OMF auditing must be enabled. Adds a statement that customers should collect data only when it is needed to solve a specific problem. Customers should store the data in a specific location with limited access and encrypt the data while it is stored.
