

Publications Reissue Highlights

Manual: *BASE24 Transaction Security Services Processing Guide*

Number: BA-AE000-14

Date: Dec-2008

Software: Release 6.0, Version 9 (TSS Release 08.2)

The following table highlights the major changes that have been made in the most recent update to the *BASE24 Transaction Security Services Processing Guide*. The first column of the table lists the sections and appendixes in which major changes have been made. The second column of the table describes the major changes for each section or appendix. These changes update the guide to TSS release 08.2 for BASE24 release 6.0, version 9.

Section/ Appendix	Major Changes
1	Adds a list of enhancements for TSS release 08.2, and service packs 1 and 2 for release 08.2. Adds DUKPT message data field encryption support for SPDH devices and AKDS support for Triton devices in TSS 07.4. Adds AKDS support for Triton devices in TSS 05.4. Note: DUKPT message data field encryption in SPDH devices and AKDS for Triton devices require CSMs.
2	Updates the description of the DUKPT Derivation Key Profile Configuration window to include message data field encryption. Updates the description of the Keys Generated Online field on the Exchange Information tab of the Interface Security Configuration window to indicate that this field is not stored in the Interface Security File (ICHG_SECURITY) when you save a record. Its only purpose is to let you save a record without entering key exchange key values in the Import and Export fields on this tab.
4	Adds Atalla command 388 (3DES UKPT Data Encrypt/Decrypt with OWF) for support of DUKPT message data field encryption in SPDH devices. Note: DUKPT message data field encryption for SPDH devices requires a CSM to TSS version 07.4.
6	Adds DUKPT message data field encryption support for SPDH devices using Atalla NSPs. Note: DUKPT message data field encryption for SPDH devices requires a CSM.

Section/ Appendix	Major Changes
----------------------	---------------

-
- | | |
|----|---|
| 12 | Adds the Visa “MSD with CVN 17” solution to the discussion of contactless transaction standards. |
| B | <p>Adds AKDS support for Tidel and Triton devices.</p> <p>Note: AKDS support for Triton devices requires a CSM.</p> <p>Corrects the description of the mod-size variable for the KEYGEN command. The default values listed were incorrect. The default value is 2048 for all device types.</p> <p>Clarifies how the Begin Date and End Date fields are set on the Channel Public Key Perusal window.</p> |
| D | Updates the “ATC Checking Configuration” topic to remove the table of possible combinations of field values for the ATC CHECK field on CPF screen 3, ATC CHECK TYPE field on CPF screen 11, and CAP ATC UPDATE field on CPF screen 13. This table now resides in the <i>BASE24-pos EMV Support Manual</i> . |
