

Publications Reissue Highlights

Manual: *BASE24 Transaction Security Manual*

Number: BA-AE000-13

Date: Dec-2006

Software: Release 6.0, Version 7

The following table highlights the major changes that have been made in the most recent update to the *BASE24 Transaction Security Manual*. The first column of the table lists the sections and appendixes in which major changes have been made. The second column of the table describes the major changes for each section or appendix. These changes update the manual from release 6.0, version 6 to release 6.0, version 7.

Section/ Appendix	Major Changes
1	Clarifies the length of Data Encryption Standard (DES) keys. Updates the “Card Verification” topic with a reference to the <i>BASE24 Transaction Security Services Processing Guide</i> for dynamic card verification support. Adds the Atalla Axx150 series of Network Security Processors to the list of supported hardware security devices for BASE24.
8	Adds Tidel to the list of ATM devices that support the BASE24-atm PIN change transaction without any additional hardware requirements.
13	Adds a reference to the <i>BASE24 Transaction Security Services Processing Guide</i> for dynamic card verification support. Updates the section for manual card verification when both an electronically acquired CVD value and manually-entered CVD value are present in a transaction. Adds a check for declining electronically entered transactions with a service code of 000. Phishers can use a stolen PAN, expiration date and CVD2 to encode a card with track data, using the CVD2 (printed on the card) in place of the CVD1 (encoded on the track), and a service code of zeroes in place of the actual service code. This check ensures that such fraudulent transactions are declined.
B	Adds support for the Atalla Axx150 series of Network Security Processors.
