

Future Updates

Manual: *BASE24 ITS Kernel Configuration Manual*

Number: OK-AE000-01

Date: 06/2002

Software: Release 1.3

The following changes affect the *BASE24 ITS Kernel Configuration Manual* for release 1.3. These changes will be made the next time the manual is updated.

The key for files input to the Extended Memory Table Build utility cannot contain a mixture of ASCII and binary data. In addition, if the key is all binary data, it cannot exceed four bytes. The Key Type field description for the Hash Table Summary Page of the Extended Memory Table Build Report will be revised as follows:

Key Type — The type of record or row key used in this extended memory table. Valid types are as follows: ALL ASCII (alphanumeric) and ALL BINARY (the binary data cannot exceed four bytes).
