

SAMARTH WAGH

*Artificial Intelligence &
Data Science Student*

PROFILE

Passionate AI&DS engineer with a beginner in deep learning, computer vision, and natural language processing. Intermediate in Python, Seaborn, Matplotlib, Numpy, Pandas and various libraries. Excellent problem-solving, research, and collaboration abilities. Seeking a challenging role to develop cutting-edge AI solutions.

I consider myself a responsible, honest, discipline and orderly person.

I am looking forward to my first work experience.

➤ EDUCATION

SNJB'S K.B.J. COLLEGE OF ENGINEERING

B.E. in Artificial Intelligence and Data Science
CGPA: 8.41 (2021-2024)

C.N.E. SCHOOL AND JR. COLLEGE

Higher Secondary Certificate (12th)
Percentage: 69.08% (Feb-2020)

S.G.G.S HIGH SCHOOL

Secondary School Certificate (10th)
Percentage: 85.00% (Mar-2018)

➤ LANGUAGE

Intermediate English

Native Marathi

Advance Hindi

Pursuing Japanese (JLPT N5)

➤ SKILLS

- **Programming Languages:** Python, C++, SQL, HTML, CSS, Javascript, LATEX
- **Deep Learning Frameworks:** TensorFlow, PyTorch, Keras
- **Libraries & Tools:** Figma, PowerBI, NumPy, Pandas, Seaborn, Matplotlib, Scikit-learn, OpenCV, NLTK

➤ ACADEMIC PROJECTS

• NEXT-GEN VOICE AI (SOBO) FOR OPTIMIZING ORGANIZATIONAL TASKS

1. The NEXT-GEN VOICE AI (SOBO) project develops a voice assistant robot using Raspberry Pi, Arduino, and stepper motors to optimize tasks at a college entrance
2. SOBO activates on the phrase "wakeup SOBO," greets users, processes questions using fuzzy logic, RNN, and GPT-3 algorithms, and delivers spoken responses
3. This system combines continuous voice listening, NLP, and synchronized physical movements for efficient organizational assistance

• HOME AUTOMATION SYSTEM

1. Set up a home automation system with an NodeMCU microcontroller, connected via WiFi and controlled using the Blynk app
2. Write Arduino code to handle sensors/actuators and communicate with Blynk
3. In the Blynk app, create a project, add widgets, and link them to virtual pins for control

• HOTEL MANAGEMENT SYSTEM

1. In php is a simple project developed using PHP, Javascript, Bootstrap, and CSS.
2. The project contains an admin and user side.
3. The admin side manages all the management like managing bookings, checking profit, payments, adding and deleting rooms, and so on.
4. For the user section, the users can go through the homepage, about, services, rooms, and contact us pages.

• FACE RECOGNIZATION SYSTEM

1. Use OpenCV for face detection and feature extraction from images
2. Train a supervised learning model (e.g., SVM) on extracted features with known labels (names)
3. Implement recognition by comparing new faces against the trained model for name output

• DATA VISUALIZATION DASHBOARD USING POWER BI TOOL

1. Power BI Dashboard created using a road accident dataset is a visual representation of data related to road accidents.
2. This dashboard leverages Power BI's data visualization capabilities to provide a concise and interactive overview of the dataset's key insights.

• UI/UX DESIGNS BY USING FIGMA

1. Created comprehensive UI designs for a fitness app and a food recipe app using Figma, focusing on intuitive user interfaces and engaging visual elements.
